

YESWANTH B

SDET | Automation Test Engineer | QA Engineer

Chennai, Tamil Nadu | +91 8523978750 | Yeswanthyes333@gmail.com | github.com/YeswanthB011

PROFESSIONAL SUMMARY

Automation Test Engineer with 3+ years of experience designing and implementing test automation frameworks using Playwright (TypeScript) and Selenium (Java). Proven track record in end-to-end (E2E) testing, regression testing, API testing (Postman, RestAssured), and CI/CD pipeline integration (GitHub Actions). Experienced in BDD with Cucumber, SQL database validation, Agile/Scrum methodology, and AI-assisted development using GitHub Copilot. Domain expertise in healthcare and insurance verticals.

TECHNICAL SKILLS

Languages: Java, TypeScript,

Automation Frameworks: Playwright, Selenium WebDriver, TestNG, Cucumber.

API Testing: Postman, Rest-assured

CI/CD & DevOps: Git, GitHub, Jenkins

Cloud: GCP

Database: PL/SQL (Oracle), Database Validation

AI-Assisted Dev: GitHub Copilot, Cursor, Playwright MCP.

WORK EXPERIENCE

Cognizant Technology Solutions May 2023 – Present

SDET / Quality Engineering & Assurance Analyst | Chennai, Tamil Nadu

Project 3: Web Application Test Automation – Vehicle Insurance Product

- Automated 75+ end-to-end (E2E) insurance workflow test scenarios using Playwright with TypeScript, covering policy issuance, renewals, and claims modules; reduced manual regression effort by ~40%.
- Developed 50+ reusable automation scripts for integration and E2E testing, improving regression test coverage and execution efficiency across releases.
- Performed API testing for 30+ REST API endpoints using Postman; validated backend data integrity using SQL queries for database verification.
- Tracked and managed defects using Jira; collaborated with developers and business analysts to identify defects early following shift-left testing strategy.

Project 2: Web Application Test Automation – Healthcare Product

- Designed and implemented a Playwright automation framework in TypeScript from scratch, including setup, configuration, and CI/CD pipeline integration via GitHub Actions — reducing regression cycle time by ~35%.
- Automated ~90 manual test cases, creating 40+ reusable scripts for regression, smoke, and E2E testing.
- Ensured cross-browser and responsive UI test coverage for an enterprise-grade healthcare application.
- Leveraged GitHub Copilot for AI-assisted test script creation, improving delivery speed and reducing scripting time by ~25%.
- Collaborated with developers and product teams to align QA coverage with sprint deliverables; resolved flaky tests and optimized locators/selectors for stable execution.

Project 1: Healthcare PBM Mainframe & Web Application Testing

- Automated 60+ test scenarios using Selenium WebDriver (Java) with Cucumber BDD framework following Page Object Model (POM) design pattern.

- Executed regression, functional, and retesting cycles across multiple releases; authored 150+ manual test cases with detailed RCA defect reports.
-

KEY ACHIEVEMENTS

- Smart India Hackathon 2024 – National Winner: Led integration of Arduino-to-cloud pipeline and authored Embedded C code for a real-time wearable sports biomechanics sensor system.
 - Reduced regression test execution time by ~35% through CI/CD automation pipeline built with GitHub Actions at Cognizant.
 - Automated 225+ test scenarios across 3 enterprise projects within 2 years of professional experience.
